Professional Summary

Skilled researcher specializing in machine learning and artificial intelligence, with industry experience rolling out machine learning models to production. Experience working with international collaborators and developing bespoke applications which harness machine learning technology in medicine.

Skills

- **Manage** a small team of ML engineers in a Toronto-based healthcare startup company
- Experience working in **multidisciplinary** field and strong foothold in A.I. community (local and international)
- **Problem solver** with experience working on challenging real-world problems which utilize state-of-the-art machine learning technology
- **Programming skills:** Python, C++, C, Java
- **Machine learning/Data analytics tools:** PyTorch, Theano, Docker, R

Experience

Altis Labs, Inc., Toronto, Canada

2019 -

Lead Machine Learning Engineer

- Design and develop machine learning models from research to production in a cloud-based environment
- Collaborate with clinical and industry partners, working closely to validate models on real medical data
- Ingest and process datasets for training models
- Public speaking and communicate findings to collaborators

Sunnybrook Research Institute, Toronto, Canada

2016 - 2019

Medical Biophysics, University of Toronto, Toronto, Canada

Vector Institute Affiliate, Toronto, Canada

Postdoctoral Fellow

- Collaborated with pathologists, oncologists and graduate students in the Medical Biophysics program at the University of Toronto to develop bespoke deep learning algorithms to analyze medical images.
- Developed an automated pipeline to analyze a dataset of over 2TB of microscopic images of breast tissue.
- Organized a global image analysis challenge, BreastPathQ, in collaboration with NCI, AAPM and FDA.

NYU School of Medicine, New York. U.S.

2015 - 2016

Postdoctoral Fellow

- Conducted independent research in 3D segmentation of the aorta in MRI scans using deep neural networks.
- Collaborated with radiologists to design and implement an MRI pulse sequence for pediatric patients.

Toshiba Medical Visualization Systems, Edinburgh, U.K.

2014

Image Analysis Research Intern (3 months)

- International collaboration with Japan to build a pipeline for extracting texture features from CT scans for Big Data analysis.
- Harnessed a in-house C++ API and expanded it to include optimized computer vision algorithms.

Education

PhD: Tumour Localisation in Histopathology Images <i>University of Dundee, Dundee, U.K.</i>	2011 - 2015
BSc Applied Computing Hons (1st class) <i>University of Dundee, Dundee, U.K.</i>	2008 - 2011

Accomplishments

Experimental Design

- Developed the “transition module” to prevent overfitting in deep neural networks.
- Designed 2 weakly-supervised learning frameworks to predict patient outcome from thousands of large-scale images.
- Planned and carried out a 3-year research project investigating novel context image descriptors.

Leadership

- Co-organized a global image analysis challenge, BreastPathQ, in collaboration with Sunnybrook, NCI and AAPM.
- Organized an “AI in Health” workshop for 14 students at the Toronto Deep Learning and Reinforcement Learning summer school.
- Volunteered to organize a machine learning journal club, currently ongoing at Sunnybrook Research Institute, Toronto.
